PROFILE

I'm a level designer who completed CGMA's "Level Design for Games" and have 7 years of professional **software-development experience**. I build levels in Unreal Engine and Unity that hold up on the second playthrough, paying attention to composition to guide the player and grounding every space in real reference. I **script my own systems in Blueprint and code**, so I don't have to wait for a programmer to bring a design to life.

PROJECTS

MONICA'S PARADOX

UNITY · STEAM CLOSED BETA

- Designed **12 puzzle-platformer levels and a two-story office environment** in collaboration with a writer and an artist
- Built the levels around constantly changing mechanics
- Went through playtest rounds, collecting feedback and making adjustments
- Implemented all gameplay systems and interactions in **C#**

LEVEL DESIGN STUDIES

UNREAL · VARYING THEMES & GENRES

- **Greyboxed** 8 levels across a broad range of themes and character controllers
- Each level was built to prove one design skill, such as reference-grounded scale, readable affordances, visual composition & player guidance, mission design and district planning and identity for open world games
- Received personalized feedback from **Shane Canning**, a senior level designer at Insomniac Games and Square Enix
- Some clips of these levels are shown in the showreel linked above

EXPERIENCE

SOFTWARE DEVELOPER · DIE KEURE PRINTING & PUBLISHING

2019 – 2026

- Shipped production software professionally, with coding experience that transfers directly to **gameplay & tools scripting** and Blueprint work
- Built deployment pipelines from scratch and improved runtime performance by profiling and patching hot paths
- Trained and mentored new hires and student developers
- Spearheaded a large-scale migration of our platform to a different provider

INDIE & GAME JAMS

UNITY · BLENDER

- Shipped 20+ game jam entries under strict deadlines, including the games **Wild** and **L4URA** in a **team of four** with writers and artists
- You can find the games on liam-swift.itch.io

TOOLS

Unreal Engine | Unity | Blueprint | Blender | Blockmesh / Greybox | PureRef | Figma | Git

DESIGN

Level design | Composition | Player guidance | Pacing & flow | Environmental storytelling | Playtest iteration

CODE

C# | JavaScript / TS | NavMesh | State machines

EDUCATION

CGMA · LEVEL DESIGN FOR GAMES

CERTIFICATE · 2025

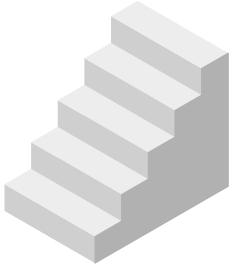

BSC SOFTWARE & SYSTEMS ENGINEERING

HOWEST · 2015–2018 · GREAT DISTINCTION
